Convergent Risks

What stage are you at?

Migration to Cloud Workflows

Embryonic	Planning/design	Established	Developing capability
Thinking of migrating to the cloud	Planning a migration to the cloud	Already migrated to the cloud	Migrating additional workloads to the cloud

convergent

Observations

Public cloud is becoming the norm rather than the exception.

Cloud security challenges faced by companies large or small.

Pure cloud vs. the hybrid model

The push for remote working...

Keep it simple.

convergent

Common Issues	Type	Result
	Accidental Misconfiguration	Inadvertently exposing data
	Poor user identity management	Vulnerable to credential stuffing/interception
	Poor vulnerability management	Systems have known vulnerabilities
	Insecure API configuration	Malicious access to content/data
	Lack of cloud security awareness	Inadvertently deploying cloud workloads with vulnerabilities.
	Lack of adequate security monitoring	Malicious activity goes undetected

Avoid Common Security Pitfalls

Planning

Have clear usage objectives.

Understand your workflows. How will your data be protected?

Don't just lift n' shift security - what was right then is <u>not</u> right now.

convergent

Avoid Common Security Pitfalls

Awareness & Training

Follow cloud provider best practice guidance - avoid common mistakes.

Are your IT staff / IT provider adequately trained? Education is important!

Consult independent hardening guides - reduce your attack surface!

convergent

Avoid Common Security Pitfalls

Safe Configuration

convergent

Patch those systems - make it difficult for the hacker, even in cloud, patching and vulnerability management is still paramount!

Deploy security policies (not paper ones!) Prevent misconfigurations.

Use the built-in cloud security tooling.
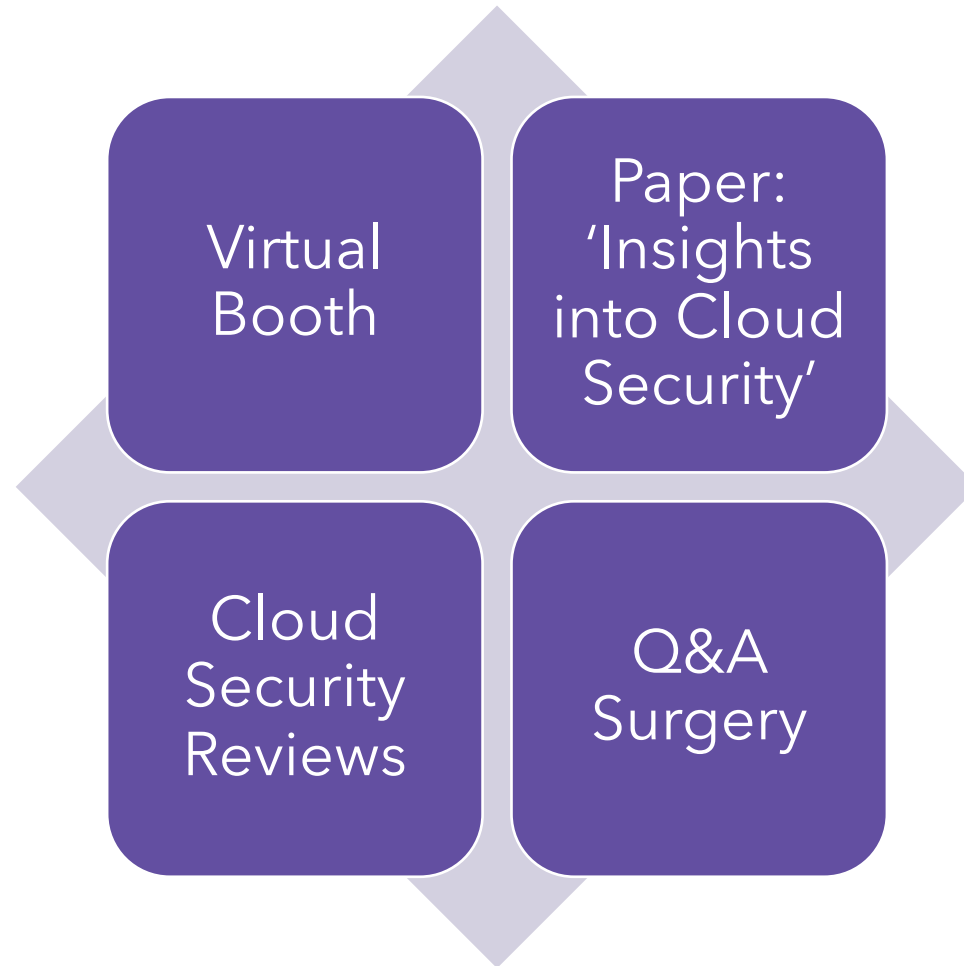

The Cloud is Never Still

Security is continuous

With **Security** by Design…

```
Requirement to
create/use cloud
workflow/application
```

```
Engage 3rd
party supplier
```

```
Engage
DevOps or IT
```

```
Refer to a cloud
provider and
industry best
practice on
secure cloud
configuration
```

```
Engage
security
design input
(in house or
3rd party)
```

```
Continuous
security
design
assurance
```

```
Solution is
built
```

```
Solution is
reviewed by
the business
```

```
Internal or 3rd
party security
testing
performed
```

```
3rd party TPN
(or similar)
assessment
performed
```

```
Seek approval
from Content
Owner
```

```
Solution
released with
security
embedded
```
