The Language Metadata Table Compliance Checklist

Checking to see if you’re already compliant?

LMT provides recommendations for display values. Regardless of how you choose to display your values, you are considered fully LMT-compliant if you are using the language codes vetted and approved by the LMT Working Group.

- Create a Crossmap of language codes using the latest release, available on the [site]. Codes should fall into the following categories:
  - Matches to existing LMT code
  - New languages you are submitting to LMT
  - Your internal codes, compliant with IETF BCP 47

- Submit crossmap to LMT for review

- Once validated, submit all missing languages (with their use cases) for addition to LMT
